

Sorry, not unobtrusive...
... for now.

<!-- form to create a Post -->

<form id="new-post" ~~action="new.html" method="post"~~>

<h1>Create a new post</h1>

<p><label>Title</label>

<input type="text" size="50" name="title"></p>

user provides title

<p><label for="body">Body</label>

<textarea name="body" rows="28" cols="80">

</textarea></p>

we convert the user input
to HTML with Markdown.

<p><input id="preview" type="button" value="Preview"/>

<input type="submit" value="Save & rarr;"></p>

</form>

we'll tie our CouchDB adapter
to the page by listening to
the form's submit event.
